

Using The Angelus bells as your alarm tone – Android

Download the sound to your computer.

Then connect your phone to your PC via a USB cable.

Put the audio file into the folder of your choice on your phone - the Alarms folder may be the easiest one.

Now that your chosen MP3 is in place, you can safely disconnect your phone after you close out of all the folders you opened.

You can select any MP3 you've put in the Alarms folder to be your new alarm tone.
